

VMS Volkswagon Amarok Installation Note

If you have already installed a VMS VW X507 unit into your VW Amarok and has experienced that the VMS unit will not be powered off with the vehicle ignition, you will need to carry out the following steps.

1. If your VMS unit does not turn off with the vehicle ignition (When the key is removed from the ignition).
2. Disconnect the vehicle battery negative terminate to turn off the unit. When the unit is turned off, remove the VMS unit from the centre console.
3. Identify a RED wire (which is labelled: "Please cut off the line here when installing the upscale car") in the main power wiring loom that goes between your vehicle and the VMS unit, as shown in the photo below.
4. Cut off the RED wire and INSULATE both ends of the cut RED wire to avoid possible shorting.
5. Re-install the VMS unit back into the vehicle and re-connect the vehicle battery terminal.
